## PROBLEM SOLVING

## PROBLEM 1 (4\%)

A portfolio consists of assets A and B. asset A makes up one-third of the portfolio and has an expected return of 18 percent. Asset B makes up the other two-thirds of the portfolio and is expected to earn 9 percent.
Required:
What is the expected return on the portfolio?

## Solution:

| Asset | Return $\left(r_{j}\right)$ | Fraction <br> $\left(w_{j}\right)$ | $w_{j} r_{j}$ |
| :---: | :---: | :--- | :--- |
| A | $18 \%$ | $1 / 3$ | $1 / 3 \times 18 \%=6 \%$ |
| B | $9 \%$ | $2 / 3$ | $2 / 3 \times 9 \%=6 \%$ |
|  |  |  | $r_{p}=12 \%$ |

PROBLEM 2 (12\%)
Sally Corporation's financial statements appear below

| Sally Corporation Balance Sheet December 31, N |  |  |
| :---: | :---: | :---: |
| Assets: |  |  |
| Current Assets |  |  |
| Cash | \$100,000 |  |
| Marketable Securities | 200,000 |  |
| Inventory | 300,000 |  |
| Total Current Assets |  | \$ 600,000 |
| Noncurrent Assets |  |  |
| Plant Assets |  | 500,000 |
| Total Assets |  | \$1,100,000 |
| Liabilities and Stockholders' Equity: |  |  |
| Current liabilities | \$200,000 |  |
| Long-Term liabilities | 100,000 |  |
| Total liabilities |  | \$ 300,000 |
| Stockholders' Equity |  |  |
| Common stock, \$1 par value, \$100,000 shares | \$100,000 |  |
| Premium on Common Stock | 500,000 |  |
| Retained Earnings | 200,000 |  |
| Total Stockholders' Equity |  | 800,000 |
| Total liabilities and Stockholders' Equity |  | \$1,100,000 |

| Sally Corporation <br> Income Statement <br> For the year Ended December 31, N |  |
| :--- | :---: |
| Net Sales | $\$ 10,000,000$ |
| Cost of Goods Sold | $6,000,000$ |
| Gross Profit | $\$ 4,000,000$ |
| Operating Expenses | $1,000,000$ |
| Income before Taxes | $\$ 3,000,000$ |
| Income Taxes (50\% rate) | $1,500,000$ |
| Net Income | $\$ 1,500,000$ |

Additional information available is a market price of $\$ 150$ per share of stock and total dividends of $\$ 600,000$ for the year ' N ', and $\$ 250,000$ of inventory as of December $31, ~ ' \mathrm{~N}-1$ '.

## Required:

Compute the following ratios:
(a) Current ratio
(b) Quick ratio
(c) Inventory turnover
(d) Average age of inventory (Days sales in inventory)

## August Exam 2017-Answers

(e) Debt-equity ratio
(f) Earnings per share (EPS)
(g) Common Dividends per share (DPS)
(h) Common Dividend payout ratio (DPR)

## Solution:

a- Current ratio $=$\begin{tabular}{c}
Current Assets <br>
$--------=-$ <br>
Current Liabilities

 

$\$ 600,000$ <br>
$---=3$ <br>
$\$ 200,000$
\end{tabular}

$$
\text { Cash + marketable securities } \$ 300,000
$$

b- Quick ratio $=------------=-----=1.5$
Current Liabilities
$\$ 200,000$

$c-$ Inventory turnover $=$| Cost of goods sold |
| :---: |
| Average inventory | | $\$ 600,000$ |
| :---: |
| $(\$ 250,000+\$ 300,000) / 2$ |

$365 \quad 365$
d- Average age of inventory $=--------=----=16.7$ days
Inventory turnover 21.82
Total liabilities $\$ 300,000$
e- Debt-equity ratio $=\frac{--------=----=0.375}{\text { Stockholders' equity } \quad \$ 800,000}$

|  | Net income | \$1,500,000 |
| :---: | :---: | :---: |
| f- Earnings per share = - - - - - - - - - - = - - - - - - = $\$ 15$ |  |  |
|  |  |  |

g- Dividends per share $=$| Dividends | $\$ 600,000$ |
| :---: | :---: |
| Outstanding shares | 100,000 shares |

h- Dividend payout $=$\begin{tabular}{cc}
Dividends per share <br>

| Earnings per share |
| :---: | \& $\$ 6$ <br>

$\$ 15$
\end{tabular}

## PROBLEM 3 (10\%)

The administrator of Hills Hospital would like a cost formula linking the costs involved in admitting patients to the number of patients admitted during a month. The admitting department's costs and the number of patients admitted during the immediately preceding eight months are given in the table below:

## August Exam 2017-Answers

| Month | Number of <br> Patients Admitted | Admitting <br> Department's <br> Costs |
| :--- | :---: | :---: |
| May | 1,800 | $\$ 14,700$ |
| June | 1,900 | 15,200 |
| July | 1,700 | 13,700 |
| August | 1,600 | 14,000 |
| September | 1,500 | 14,300 |
| October | 1,300 | 13,100 |
| November | 1,100 | 12,800 |
| December | 1,500 | 14,600 |

## Required:

a- Use the high-low method to establish the fixed and variable components of admitting costs.
b- Express the fixed and variable components of admitting costs as a cost formula in the linear equation form
$Y=a+b X$

## Solution:

a-

| Month | Number of Patients Admitted | Admitting Department Costs |
| :--- | :--- | :--- |
| High activity level (June) | 1,900 | $\$ 15,200$ |
| Low activity level (November) | 1,100 | 12,800 |
| Change | 800 | $\$ 2,400$ |

Change in cost
\$2,400
Variable cost = -------- = $--------=\$ 3$ per patient admitted
Change in activity 800 patients admitted
Fixed cost element $=$ Total cost - Variable cost element

$$
=\$ 15,200-(\$ 3 \text { per patient admitted } \times 1,900 \text { patient admitted })=\$ 9,500
$$

b- The cost formula expressed in the linear equation form is $Y=\$ 9,500+\$ 3 X$

## PROBLEM 4 (11\%)

Sophie's Pet Shop is considering the purchase of a new delivery van. Sophie Smith, owner of the shop, has compiled the following estimates in trying to determine whether the delivery van should be purchased:

| Cost of the van | $\$ 25,000$ |
| :--- | :--- |
| Annual net cash flows | 4,300 |
| Salvage value | 3,000 |
| Estimated useful life | 8 years |
| Cost of capital | $10 \%$ |
| Present value of an annuity of 1 | 5.335 |
| Present value of 1 | 0.467 |

## August Exam 2017 - Answers

Sophie's assistant manager is trying to convince Sophie that the van has other benefits that she hasn't considered in the initial estimates. These additional benefits, including the free advertising the store's name painted on the van's doors will provide, are expected to increase net cash flows by $\$ 500$ each year.

## Required:

1. Calculate the net present value of the van, based on the initial estimates. Should the van be purchased?
2. Calculate the net present value, incorporating the additional benefits suggested by the assistant manager. Should the van be purchased?

## Solution

(1) Present value of annual cash flows $(\$ 4,300 \times 5.335) \quad \$ 22,941$

Present value of salvage value $(\$ 3,000 \times 0.467) \quad 1,401$

$$
\$ 24,342
$$

Capital investment
25,000
Net present value
(\$ 658)
Based on the negative net present value of $\$ 658$, the van should not be purchased.
(2) Present value of annual cash flows [ $(\$ 4,300+\$ 500) \times 5.335]$
\$25,608
Present value of salvage value $(\$ 3,000 \times 0.467)$
1,401
$\$ 27,009$
Capital investment
25,000
Net present value
$\$ 2,009$
Incorporating the additional benefits of $\$ 500 /$ year into the calculation produces a positive net present value of $\$ 2,009$. Therefore, the van should be purchased.

## PROBLEM 5 (10\%)

Eagle Corporation has the following direct requirements for the production of a machine tool set:

| Direct Labor | Required Time <br> (hours) | Hourly Rate (\$) |
| :--- | :---: | :---: |
| Machining | 6 | 10 |
| Assembly | 10 | 8 |

Forecasted sales for June, July, August and September are 6000, 5000, 8000 and 7000 units, respectively. June 1 beginning inventory of the tool set was 1500 unit. The desired units in ending inventory each month is one-half of the forecasted sales for the following month.

## Required:

1. Prepare a production budget (in units) for the months of June, July and August.
2. Develop a direct labor budget (in \$) for the months of June, July and August for each type of direct labor.

## Solution:

| Eagle Corporation (Production Budget) |  |  |  |
| :--- | :--- | :--- | :--- |
|  | June | July | August |
| Forecasted sales | 6,000 units | 5,000 | 8,000 |

## August Exam 2017-Answers

| Add: Desired ending inventory | 2,500 | 4,000 | 3,500 |
| :--- | :--- | :--- | :--- |
| Total need | 8,500 | 9,000 | 11,500 |
| Less: Beginning inventory | 1,500 | 2,500 | 4,000 |
| Number of units to be produced | 7,000 | 6,500 | 7,500 |

| Eagle Corporation (direct labor Budget) |  |  |  |
| :--- | :--- | :--- | :--- |
| Machining: | June | July | August |
| Budgeted production | 7,000 | 6,500 | 7,500 |
| Direct labor hours per unit | X 6 hours | X 6 | X 6 |
| Total direct labor hours required | 42,000 hours | 39,000 | 45,000 |
|  | $X ~ \$ 10$ | $X ~ \$ 10$ | X \$10 |
| Direct labor cost | $\$ 420,000$ | $\$ 390,000$ | $\$ 450,000$ |

| Assembly: | June | July | August |
| :--- | :--- | :--- | :--- |
| Budgeted production | 7,000 units | 6,500 | 7,500 |
| Direct labor hours per unit. | X 10 hours | X 10 | X 10 |
| Total direct labor hours required | 70,000 | 65,000 | 75,000 |
|  | $\mathrm{X} \mathrm{\$ 8}$ | $\mathrm{X} \mathrm{\$ 8}$ | X \$8 |
| Direct labor cost | $\$ 560,000$ | $\$ 520,000$ | $\$ 600,000$ |

## PROBLEM 6 (8\%)

Assume that House and Garden Depot expects each division to earn a 16\% target rate of return. House and Garden Depot's weighted average cost of capital (WACC) is $13 \%$, and its effective tax rate is $30 \%$. Assume that the company's original Retail Division had the following results last year (in millions of dollars):

| Operating income | $\$ 1,450$ |
| :--- | ---: |
| Total assets | 16,100 |
| Current liabilities | 3,600 |
| Sales | 26,500 |

## Required:

a-Compute the Retail Division's ROI.
b- Compute and interpret the Retail Division's RI.

## Solution:

$$
\begin{aligned}
\mathrm{a}-\mathrm{ROI} & =\text { Sales margin } \times \text { Capital turnover } \\
& =(\text { Operating income } \div \text { Sales }) \times(\text { Sales } \div \text { Total assets }) \\
& =(\$ 1,450 \div \$ 26,500) \times(\$ 26,500 \div \$ 16,100) \\
& =0.055 \times 1.646 \\
& =0.091
\end{aligned}
$$

b- RI = Operating income - (Target rate of return $\times$ Total assets)

$$
\begin{aligned}
& =\$ 1,450-(16 \% \times \$ 16,100) \\
& =\$ 1,450-\$ 2,576 \\
& =(\$ 1,126)
\end{aligned}
$$
