## QUESTIONS

Question 1: (10\%)
Required:

1. Calculate the average production cycle.
2. Calculate the average collection cycle.
3. Calculate the average payment cycle.
4. Calculate the cash conversion cycle.

## 1. Average production cycle:

Average inventory $=($ beginning inventory + ending inventory $) \div 2$

$$
=(\$ 8,000+\$ 5000) \div 2=\$ 6,500
$$

Inventory turnover $=$ cost of goods sold $\div$ average inventory

$$
=\$ 312,000 \div \$ 6,500=48 \text { times }
$$

Production cycle $=365 \div$ inventory turnover $=365 \div 48=7.6$ days.
2. Average collection cycle:

Average accounts receivable = (beginning accounts receivable + ending accounts receivable) $\div 2$ $=(\$ 18,000+\$ 16,000) \div 2=\$ 17,000$

## LEBANESE ASSOCIATION OF CERTIFIED PUBLIC ACCOUNTANTS <br> MANAGERIAL ACCOUNTING December 2017 KEY

Accounts receivable turnover $=$ credit sales $\div$ average accounts receivable

$$
=\$ 450,000 \div \$ 17,000=26.5 \text { times }
$$

Collection cycle $=365 \div$ accounts receivable turnover rate

$$
=365 \div 26.5=13.8 \text { days }
$$

## 3. Average payment cycle:

Average accounts payable $=$ (beginning accounts payable + ending accounts payable) $\div 2$

$$
=(\$ 7,000+\$ 5,000) \div 2=\$ 6,000
$$

Accounts payable turnover = cost of goods sold $\div$ average accounts payable

$$
=\$ 312,000 \div \$ 6,000=52 \text { times }
$$

Accounts payable cycle $=365 \div$ accounts payable turnover

$$
=365 \div 52=7.0 \text { days }
$$

## 4. Cash conversion cycle:

Cash conversion cycle $=$ production cycle + collection cycle - payment cycle

$$
\text { =7.6 + } 13.8-7.0=14.4 \text { days }
$$

## Question 2: (10\%)

## Required:

Find the expected risk and return for the long-term government bond for next year.

## Solution:

Expected Return of Long-Term Bond

| State of the <br> Economy | Probability of <br> Economic State <br> (a) | Return in <br> Economic State <br> (b) | Probability x <br> Return (a) $\times(b)$ | Result (c)= (a)x(b) |

The standard deviation is the square root of the variance, so:
Standard deviation $=(0.00071875)^{1 / 2}=0.026809513 \sim 2.68 \%$
