| 16. | B |
| 17. | D Predetermined overhead rate = Estimated total manufacturing overhead cost $\div$ Estimated total amount of the allocation base $=\$ 118,800 \div 22,000$ machine-hours $=\$ 5.40$ per machine-hour |
| 18. | B Net change in cash and cash equivalents = Net cash provided by (used in) operating activities + Net cash provided by (used in) investing activities + Net cash provided by (used in) financing activities <br> $-\$ 19,000=$ Net cash provided by (used in) operating activities - $\$ 9,000+\$ 16,000$ <br> Net cash provided by (used in) operating activities $=-\$ 19,000+$ $\$ 9,000-\$ 16,000=-\$ 26,000$ |
| 19. | ```C Return on common stockholders' equity = (Net income - Preferred dividends) \(\div\) Average common stockholders' equity \(12.5 \%=\) (Net income \(-\$ 16,000) \div(\$ 2,000,000-\$ 200,000)\) Net income \(-\$ 16,000=12.5 \% \times \$ 1,800,000\) Net income \(=12.5 \% \times \$ 1,800,000+\$ 16,000\) \(=\$ 225,000+\$ 16,000=\$ 241,000\)``` |
| 20. | A Variable cost per guest for supplies $=\$ 148.20 \div 57$ guests $=\$ 2.60$ per guest <br> Variable cost per guest for laundry $=\$ 216.60 \div 57$ guests $=\$ 3.80$ per guest |

Activity level
53 Guests
Variable overhead costs:
Supplies (\$2.60 per guest * 53 guests) \$ 137.80
Laundry (\$3.80 per guest * 53 guests) 201.40
Fixed overhead costs:
Utilities 170.00
Salaries and wages $\quad 4,310.00$
Depreciation $\quad \underline{2,340.00}$
Total overhead cost \$7,159.20

## Question 1 Performance Measure (Product Profitability Analysis)

1. Margin of safety in units = Expected sales in units - breakeven sales in units

$$
\begin{aligned}
& =8,000 \\
& =5.500 \text { units }
\end{aligned}
$$

Margin of safety in dollars $=$ Expected sales in dollars - Breakeven sales in dollars

$$
\begin{aligned}
& =(8,000 \times \$ 10) \quad-(2,500 \times \$ 10) \\
& =\$ 55,000
\end{aligned}
$$

## Margin of safety in units

Margin of safety as percentage $=-$ - - - - - - -

> Expected sales in units

$$
\begin{aligned}
& \text { 5,500 pairs } \\
= & ----- \\
& 8,000 \text { pairs } \\
= & 68.75 \%
\end{aligned}
$$

Fleet Foot's margin of safety is quite high. Sales have to fall by more than 5,500 units (or $\$ 55,000$ ) before fleet incurs a loss. Fleet will continue to earn a profit unless sales drop by more than $68.75 \%$.
2. At its current level of volume, Fleet's operating income is as follows:

Contribution margin (8,000 pairs $\times \$ 4$ / pair) $\$ 32,000$
Less: fixed expenses
$(10,000)$
Operating income
\$22,000

Fleet's operating leverage factor at this level of sales is computed as follows:
Contribution margin $\$ 32,000$
Operating leverage factor $=-$ - $-----=----=1.45$ (rounded)
Operating income $\$ 22,000$

If sales volume declines by $25 \%$, operating income will decline by $36.25 \%$ (Fleet's operating leverage factor of 1.45 multiplied by $25 \%$ ).
3. If Fleet drops its sales price to $\$ 9$ per pair, its contribution margin per pair declines to $\$ 3$ (sales price of $\$ 9-$ variable cost of $\$ 6$ ). Each sale contributes less toward covering fixed costs. Fleet's new breakeven point increases to 3,334 pairs of socks ( $\$ 10,000$ fixed cost $\div \$ 3$ unit contribution margin).
4.

|  | Hiking Socks | Dress Socks | Total |
| :--- | :--- | :--- | :--- |
| Sales price per unit | $\$ 9.00$ | $\$ 7.00$ |  |
| Deduct: Variable expense per unit | $(6.00)$ | $(2.75)$ |  |
| Contribution margin per unit | $\$ 3.00$ | $\$ 4.25$ |  |
| Sales mix | X 1 | X 4 | 5 |
| Contribution margin | $\$ 3.00$ | $\$ 17.00$ | $\$ 20.00$ |
| Weighted-average contribution margin per unit <br> $(\$ 20 / 5)$ |  |  | $\$ 4.00$ |

Fixed expenses + Operating income
$\begin{aligned} & \text { Sales in total units }=- \\ & \text { Weighted-average contribution margin per unit }\end{aligned}$

$$
\begin{aligned}
& \$ 10,000+\$ 0 \\
&=------=2,500 \text { pairs of socks } \\
& \$ 4
\end{aligned}
$$

Breakeven sales of dress socks $(2,500 \times 4 / 5)=2,000$ pairs of socks
Breakeven sales of hiking socks $(2,500 \times 1 / 5)=500$ pairs of hiking socks
By expanding its product line to include higher-margin dress socks, Fleet foot is able to decrease its breakeven point back to its original level ( 2,500 pairs). However, to achieve this breakeven point, Fleet Foot must sell the planned ratio of four pairs of dress socks to every one pair of hiking socks.

Question 2 Investment Decision (Capital Budgeting, Net Present Value) Solution:
After-tax cash benefit:

| Cash <br> benefit <br> year | (a) | Depreciation | Taxable income | Income tax <br> (b) | Net after- <br> tax cash <br> Inflow |
| :--- | :---: | :--- | :--- | :--- | :--- |
| 1 | $\$ 25,000$ | $\$ 12,500$ | $\$ 12,500$ | $\$ 5,000$ | $\$ 20,000$ |
| 2 | 25,000 | 12,500 | 12,500 | 5,000 | 20,000 |
| 3 | 25,000 | 12,500 | 12,500 | 5,000 | 20,000 |
| 4 | 25,000 | 12,500 | 12,500 | 5,000 | 20,000 |
|  |  |  |  |  |  |
| 1 | $\$ 45,000$ | $\$ 15,000$ | $\$ 30,000$ | $\$ 12,000$ | $\$ 33,000$ |
| 2 | 19,000 | 15,000 | 4,000 | 1,600 | 17,400 |
| 3 | 25,000 | 15,000 | 10,000 | 4,000 | 21,000 |
| 4 | 25,000 | 15,000 | 10,000 | 4,000 | 21,000 |

Net Present Value

| Year | Cash (Outflow) Inflow | Present Value of \$1 <br> 8 Percent | Net present value of cash flow |
| :---: | :---: | :---: | :---: |
| Machine 1 |  |  |  |
| 0 | \$(50,000) | 1,000 | \$(50,000) |
| 1-4 | 20,000 | 3.312 | 66,240 |
|  |  | Net present value | \$ 16,240 |
| Machine 2 |  |  |  |
| 0 | \$(60,000) | 1,000 | \$(60,000) |
| 1 | 33,000 | 0.926 | 30,558 |
| 2 | 17,400 | 0.857 | 14,912 |
| 3 | 21,000 | 0.794 | 16,674 |
| 4 | 21,000 | 0.735 | 15,435 |
|  |  | Net present value | \$17,579 |

October 26, 2016 Extra Session

## Question 3 Corporate Finance (Risk and Return)

SOLUTION

$$
\begin{gathered}
r=\sum r_{i} p_{i} \\
\sigma=\sqrt{\sum\left(r_{i}-\bar{r}\right)^{2} p_{i}}
\end{gathered}
$$

It is convenient to set up the following table:

| $r_{i}(\%)$ | $p_{i}$ | $r_{i} p_{i}(\%)$ | $\left(r_{i}-\bar{r}\right)(\%)$ | $\left(r_{i}-\bar{r}\right)^{2}$ | $\left(r_{i}-\bar{r}\right)^{2} p_{i}(\%)$ |
| ---: | ---: | ---: | :---: | :---: | :---: |
| -20 | 0.1 | -2 | -32 | 1,024 | 102.4 |
| 5 | 0.2 | 1 | -7 | 49 | 9.8 |
| 10 | 0.3 | 3 | -2 | 4 | 1.2 |
| 25 | 0.4 | $\underline{10}$ | 13 | 169 |  |
|  |  | $\bar{r}=\underline{\underline{12}}$ |  |  | $\sigma^{2}=\frac{67.6}{181}$ |

Since $\sigma^{2}=181, \sigma=\sqrt{181}=13.45 \%$.

Question 4 (Cash Budgeting)

- موازنـة المقبوضـات
